

LEAN-TO S2000

GrowSpan Lean-To S2000 Greenhouses maximize growing potential in even the smallest spaces

Lean-To S2000 Commercial Greenhouses include the same features as GrowSpan's Series 2000 Greenhouse, but with a design that's cut in half at the ridge. This produces an economical structure that fits neatly alongside existing buildings, helping growers with limited space increase profitability.

The GrowSpan Greenhouse Structure Advantage

Lean-To design - Functional shape with 8 mm polycarbonate roof and sidewalls for high snow applications.

10', 12', 15', 17-1/2', 20-1/2', 25' widths - American-made, triple-galvanized structural steel frames.

Integrated flashing seals out water between greenhouse and adjacent building.

Base plate system offers flexible anchoring options.

Turnkey and custom designs - Ensure your operation gets the ideal structure.

Optional environmental control packages - Produce thriving crops in any region.

Experts on staff - GrowSpan Greenhouse Specialists have industry experience and provide invaluable advice.

In-house services - Streamline your project with in-house financing, design, engineering and installation.
