GROWERS SUPPLY PROVIDES OPTIMAL GREENHOUSE SOLUTIONS

From commercial growing operations to the neighborhood nursery, Growers Supply has a greenhouse to meet the needs of any growing professional. Our commercial GrowSpan greenhouses are manufactured from the highest-quality materials and are backed by a 100 percent satisfaction guarantee. Growers Supply has an array of stock and design-build GrowSpan greenhouse solutions that will meet any growing requirement.

**GROWERS SUPPLY
ADVANTAGE**

- Made in the USA – Custom and stock greenhouses for every grower.
- Durability and dependability – Triple-galvanized structural steel, truss designs and ultra-strong polycarbonate options.
- Low cost per square foot.
- Energy-efficient designs – Reduce utilities costs.
- Quick to manufacture and install.
- Maintain the ideal environment – Utilize greenhouse vents or environmental controls.
- Arched and peak roof designs.
- Impact and UV-resistant walls and roofs are available.
- One-stop shop for everything growing – Structures, growing systems, accessories, controls and more.
- Factory direct to your door.

Roll-Up Low Pro Tunnel

GROWERS SUPPLY REVEALS NEW INVENTIVE GROWING STRUCTURE

Growers Supply, the industry-leader in greenhouses, high tunnels and hydroponic systems, introduced a new growing structure, the GrowSpan Roll-Up Low Pro Tunnel.

This tunnel utilizes an innovative, low-profile design that allows the cover to easily retract into the peak of the roof with a simple twist of the wrist.

Growers have the option of covering the tunnel with 6 mil clear greenhouse film or a 6 oz. black/silver cover, which provides light deprivation to control flowering cycles. These durable covers create an economic solution for protecting delicate plants and extending the growing season, all while providing the ability to naturally ventilate the structure in a matter of seconds.

The manual, roll-up mechanism can be easily operated by one person, and allows for both sides to be rolled up or either side to be rolled up while the other remains down. This allows growers to block out damaging sunlight or wind without eliminating natural ventilation.

The Roll-Up Low Pro Tunnels are offered in 26 feet and 30 feet wide, and they come in lengths of 24 feet, 36 feet and 48 feet long. Structures stand 5 feet tall at the peak and 32 inches at the sidewalls. End panels are included with each tunnel and feature a zippered center that allows carts, wagons and other equipment to be brought in.

The GrowSpan Roll-Up Low Pro Tunnel is built to last and can withstand even the harshest environments. The ultra-strong steel frame is constructed of 14-gauge, USA-made, triple-galvanized structural steel tubing, ensuring a long life. Each structure also includes heavy-duty ground posts, allowing for easy installation on any surface.

TABLE ROCK TEA COMPANY

Challenge: Growing tea in South Carolina climate
Solution: One Three Bay Gutter Connected
GrowSpan Series 1000 Commercial Greenhouse

Size: 72'W x 48'L
Location: Pickens, S.C.
Application: Domestic tea production

Not many people attempt to grow tea in the United States, but Steve Lorch, CEO of Table Rock Tea Company, is one of those brave souls. Lorch founded the company in 2008 after being inspired while on a mission trip to the famous Kapkatet tea region of Kenya. Table Rock's land is located just outside of Table Rock State Park in Pickens, South Carolina, which lends itself particularly well for tea production. Lorch and his wife Jennifer's goal was to grow "Uniquely American tea" in the foothills of Table Rock Mountain, and so their adventure began.

Lorch needed a customized structure designed for propagating tea from seeds and cuttings. Growers Supply rose to the top of his list. "Growers Supply was the only company willing to meet all of our design requirements, while also being cost-effective and offering a well-built structure," said Lorch. Table Rock Tea Company purchased one 72' wide by 48' long three bay gutter connected GrowSpan Series 1000 Greenhouse, an 8' wide by 12' long tea propagation container, a custom 2-tier polymax bench system and Svensson Solaro 50% reflective shade to help protect the sensitive crop.

Growers Supply met Lorch's expectations on the project, "Overall, everyone says the house is very professional in addition to being solidly built, and the comfortable, fun working space has allowed for more volunteers to get involved in the company."

**GREENHOUSE BUILT FOR
STRENGTH**

Growers looking for a dependable and durable greenhouse turn to Growers Supply. Above is Growers Supply's greenhouse covering holding hundreds of pounds concrete.
